RE: Phase I Environmental Site Assessment (ESA)
Euharlee Road and McCormick Road Site ± 38.99 acres
Parcel Number: 0051-0613-001
Euharlee, Bartow County, Georgia
Project Number: CE23MAC:03

Dear Mr. Baker,

Rimkus Consulting Group, Inc., **DBA Contour Environmental, LLC (Contour)** has completed the authorized Phase I Environmental Site Assessment (ESA) for the above-referenced site. This assessment was performed in general conformance with the agreed upon scope of service described in Contour Proposal: CE23MAC-298, dated August 18, 2023, and ASTM Standard E1527-21, and the U.S. EPA All Appropriate Inquiries (AAI) Rule.

Based on results of this assessment, no further environmental investigation is warranted.

We appreciate the opportunity to provide our environmental consulting services to Macallan Capital LLC. If you have any questions regarding this report or if we may be of further service to you, please contact our office at (678) 303-2600.

Sincerely,
CONTOUR ENVIRONMENTAL, LLC

Andrew G. Riess, EP
Senior Environmental Consultant

Dana A. Spotts, REPA, EP
Director

1.0 EXECUTIVE SUMMARY

1.1 LOCATION

The site property consists of one undeveloped parcel of land totaling ±38.99 acres, located to the north of Euharlee Road and to the west of Adams Chapel Road in Euharlee, Bartow County, Georgia. More specifically, the site property is identified as Tax Parcel Number: 0051-0613-001. The site was evaluated by Contour Environmental, LLC (Contour) for the purpose of identifying *recognized environmental conditions (RECs)*, *historical recognized environmental conditions (HRECs)*, and *controlled recognized environmental conditions (CRECs)* in connection with the property.

1.2 PHASE I ESA

We have performed this Phase I Environmental Site Assessment (ESA) of the site in general conformance with American Society for Testing and Materials (ASTM) Standard E1527-21, and the U.S. EPA “AAI” Rule.

The scope of the Phase I Environmental Site Assessment (ESA) included the following tasks: a site reconnaissance to look for visual evidence of potential chemical contamination including underground storage tanks (USTs), aboveground storage tanks (ASTs), stained soils, stressed vegetation, noxious odors, unidentified drums, electric or hydraulic equipment possibly containing polychlorinated biphenyls (PCBs), and other solid or hazardous wastes; a general reconnaissance of areas within a one-mile radius of the subject site; a review of specific environmental regulatory listings; a review of practically available historical records and aerial photographs; a review of published literature concerning site area soils, geology, and hydrology, and interviews with individuals familiar with the site.

1.3 ENVIRONMENTAL CONCERNS AND CONCLUSIONS

The following evidence of RECs, HRECs, and CRECs were identified during this assessment:

On-Site:

No on-site RECs, HRECs, and/or CRECs were identified during this assessment.

However, the following Business Environmental Risks were identified:

- The agricultural use of the subject property has likely included agricultural related chemicals, including fertilizers, pesticides and/or herbicides. These chemicals may accumulate in shallow soil throughout the agricultural areas, particularly in drainage areas. The residual chemicals are typically limited to shallow, near surface soil, and are considered a *de minimis* condition. During redevelopment of the subject property, soils should be appropriately managed in accordance with applicable regulations.
- Scattered debris and a dilapidated ancillary/barn structure were observed on the northeastern portion of the site property. The debris consisted of lumber, plastics, building materials, bottles, cans, scrap metal, and other various refuse. Evidence of staining, container spillage, noxious chemical odors, hazardous materials, and/or stressed vegetation was not noted. Therefore, the materials noted above do not appear to have adversely impacted the surface or subsurface environment of the site and are not considered to be a REC in connection with the site property. Nonetheless, the materials should be removed from the site and properly disposed in a permitted waste disposal facility.
- Due to the extensive nature of vegetative growth throughout the site property, a thorough visual identification for water wells was not possible. Given the setting of the site property, water wells may exist on the site property. Any wells discovered during re-development activities should be properly abandoned by a GA-certified well contractor prior to site redevelopment.

Off-Site:

No off-site RECs, HRECs, and/or CRECs were identified during this assessment.

Based on results of this assessment, no further environmental investigation is warranted.

1.4 VAPOR ENCROACHMENT SCREENING

As required by ASTM E1527-21 and the U.S. EPA “AAI” Rule, Contour conducted a Tier 1 Vapor Encroachment Screening (VES) of the site property in general conformance with ASTM E2600-10 “Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions”. The purpose of the Tier 1 VES is to identify *vapor encroachment conditions (VECs)* associated with the site and/or surrounding property.

Based on the Tier 1 assessment conducted, Contour concludes that no potential VECs were identified during this assessment.

1.5 SIGNIFICANT ASSUMPTIONS AND DATA GAPS

The subject property inspection consisted of a walkover of the subject property perimeter and exterior subject property areas. Furthermore, during the subject property inspection, Contour did not inspect inaccessible areas of the subject property including areas of extremely dense vegetation. The adjoining properties were visually observed from curbside without being entered. Contour has no reason to believe the inability to inspect these areas would alter the findings or recommendations set forth in this report or be considered a significant data gap. Additionally, no significant data gaps in historical information were identified that would impact our ability to identify RECs.

Conclusions stated herein are based upon publicly available information and other documented sources. Contour has assumed, where reasonable, that the information reviewed is true and accurate. Contour assumes no responsibility for inaccurate information that is not otherwise obvious in light of information of which Contour has actual knowledge. Contour's subject property observations are of the conditions observed at the time of the assessment.

Contour reviewed an environmental database search report. Contour's conclusions based on the search report are limited to the accuracy of that report. To the extent possible, Contour's field observations are used to verify the information or identify errors and inconsistencies in the search report regarding the listed facilities in the immediate vicinity of the subject property.

This report provides an estimation of groundwater flow direction at the subject property based on visual observations and topographical data. This assessment did not include groundwater sampling and water table elevation measurement. True groundwater flow direction can only be determined through direct measurement of groundwater elevations from properly installed on-site groundwater monitoring wells. The groundwater flow direction estimation should not be considered a true measurement of groundwater flow direction.

1.6 REPORT VIABILITY

Per ASTM Standard Practice E1527-21, a Phase I ESA is presumed to be viable when it is conducted within 180 days prior to the date of acquisition of the subject property (or, for transactions not involving an acquisition, the date of the intended transaction).

The dates of the components presented for *interviews*, review of government records, visual inspections, and declaration by *environmental professional*, are provided below. Completion of searches for recorded environmental cleanup liens is a *user's* responsibility; however, if the *User* has engaged Contour to conduct these searches, the date will be identified below.

TABLE OF CRITICAL DATES

Visual Inspection	September 8, 2023
Interviews with owners, operators, and occupants	*NA
Declaration of Environmental Professionals	September 11, 2023
Review of federal, tribal, state, and/or local government records	September 1, 2023
Environmental Lien Search	*NI

*NA: Not applicable/unable to interview current owners, operators, and occupants

*NI: Not included within the scope of work

Based on the earliest data collection date of September 1, 2023, this report is viable until February 28, 2024.

It should be noted that the executive summary is only intended to represent a brief summary of our findings and is not a detailed account of all information provided in this report. The report should be reviewed in its entirety prior to drawing any final conclusions as to potential environmental conditions associated with the site.

2.0 INTRODUCTION

2.1 BACKGROUND

The purpose of this environmental assessment is to investigate and identify *recognized environmental conditions (RECs)*, *historical recognized environmental conditions (HRECs)*, and *controlled recognized environmental conditions (CRECs)* associated with the site and/or surrounding property.

RECs, as defined in the ASTM Standard Practice E1527-21, include the following:

The presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment. A de minimis condition is not a recognized environmental condition.

HRECs, as defined in the ASTM Standard Practice E1527-21, include the following:

A previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the subject property to any controls (for example, activity and use limitations or other property use limitations). A historical recognized environmental condition is not a REC.

CRECs, as defined in the ASTM Standard Practice E1527-21, include the following:

A REC affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to implementation of required controls (for example, activity and use limitations or other property use limitations).

This Phase I Environmental Site Assessment (ESA) has been conducted in general conformance with ASTM *Standard Practice for Environmental Site Assessments: Phase I Site Assessment Process*, Designation E1527-21, and the U.S. EPA "AAI" Rule.

Additionally, Contour conducted a Tier 1 Vapor Encroachment Screening (VES) of the site property. The purpose of this screening is to identify *vapor encroachment conditions (VECs)* associated with the site and/or surrounding property. VECs, as defined in ASTM Standard Practice E2600-10, is defined as: *the presence or likely presence of contaminant of concern vapors in the subsurface of the target property caused by the release of vapors from contaminated soil or groundwater or both either on or near the target property as identified by the Tier 1 or Tier 2 procedures*. The Tier 1 Vapor Encroachment Screening (VES) has been conducted in general conformance with ASTM *Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions*, Designation E2600-10, and the U.S. EPA "AAI" Rule.

Historical and environmental information pertaining to the subject site has been included in this report to the extent that such information is "publicly available" and "practically reviewable," as defined in the above-referenced standard practice manual, within reasonable time and monetary constraints.

Although this assessment has attempted to identify the potential for environmental impacts to the site property, potential sources of contamination may have escaped detection due to: (1) the limited scope of this assessment, (2) inaccuracy of public records, (3) the presence of undetected or unreported environmental incidents, (4) inaccessible areas, and/or (5) deliberate concealment of detrimental information. It was not the purpose of this assessment to determine the actual presence, degree or extent of contamination at the site, except as specifically described in previous sections of this report. This would require additional exploratory work, including supplemental sampling and laboratory analysis.

Contour reviewed an environmental database search report. Contour's conclusions based on the search report are limited to the accuracy of that report. To the extent possible, Contour's field observations are used to verify the information or identify errors and inconsistencies in the search report regarding the listed facilities in the immediate vicinity of the site.

This report may be relied upon by **Macallan Capital LLC**, and their subsidiaries and affiliates, subject to the terms and conditions of the service agreement between Contour Environmental, LLC and Macallan Capital LLC. No other person or entity may rely on this report without written authorization from Contour Environmental, LLC and Macallan Capital LLC.

2.2 REFERENCES AND PROCEDURES

Research and evaluation of environmental conditions at the site and surrounding properties included utilization of the following sources:

1. Geologic information published by the USGS and the Georgia Geological Survey. William Z. Clark, Jr. and Arnold C. Zisa, Physiographic Map of Georgia (GA DNR, 1976).
2. United States Department of Agriculture (USDA), Natural Resource Conservation Service (NRCS), Web Soil Survey of Bartow County, Georgia.
3. Environmental Data Resources, Inc. (EDR) Regulatory Report No. 7434064.2s, dated September 1, 2023.
4. EDR Vapor Encroachment Screen Report No. 7434064.2s, dated September 5, 2023.
5. USGS 7.5 Minute Quadrangle “*Kingston, Georgia*” 2020 provided by EDR.
6. On-line property record information from the *Bartow County* Tax Assessor.
7. Information provided by and ASTM User Questionnaire completed by Mr. James Baker, with Macallan Capital LLC, report user.
8. Information provided by Ms. Brandy Nation, Administrative Services Coordinator, with the Bartow County Fire & Emergency Services.
9. Aerial photographs dated 1938, 1943, 1955, 1960, 1971, 1981, 1988, 1999, 2007, 2010, 2015, and 2019 provided by EDR.
10. Historic topographic maps dated 1891, 1896, 1906, 1908, 1972, 2014, 2017, and 2020 provided by EDR.
11. Sanborn Map search (no coverage) provided by EDR.
12. City Directory search provided by EDR.

3.0 SITE SETTING

3.1 GENERAL DESCRIPTION

The site property consists of one undeveloped parcel of land totaling ±38.99 acres, located to the north of Euharlee Road and to the west of Adams Chapel Road in Euharlee, Bartow County, Georgia. More specifically, the site property is identified as Tax Parcel Number: 0051-0613-001. A Subject Property Location Map, depicted on the USGS “*Kingston, Georgia*” topographic quadrangle is attached as Figure 1.

The site property consists of mostly agricultural land (row crops) and undeveloped (wooded and cleared) land, containing a diversity of mature hardwoods and softwood tree species with moderate vegetative undergrowth. A dilapidated ancillary/barn structure is developed within the wooded area on the northeastern portion of the site. A sanitary sewer easement traverses the southwestern portion of the site.

NOTE: It should be clearly noted that the ground surface(s) throughout the site property were obscured by thick vegetative growth, and therefore, could not be thoroughly assessed.

According to available zoning records reviewed online at <https://www.qpublic.net/ga/bartow/search.html> the site property is currently zoned as C-1, general business district.

Residential development and All About Jesus Ministries/River Church border the site to the north, followed by undeveloped wooded and cleared land. Euharlee Road borders the site to the south, followed by undeveloped (wooded and cleared) land, agricultural land, and several residential structures. Euharlee Storage and U-Haul Rentals, agricultural land, and undeveloped (wooded and cleared) land border the site to the west. Adams Chapel Road and undeveloped (wooded and cleared) land border the site to the east, followed by undeveloped (wooded and cleared) land and residential development.

Access to the site is provided via Euharlee Road located to the south and Adams Chapel Road located to the east. A Subject Property Plan is attached as Figure 2. Site Photographs are attached as Appendix A.

Evidence of emergency generators was not observed during the site visit.

3.2 HYDROGEOLOGY

3.2.1 *Geologic Setting:*

The site is located in the Valley and Ridge physiographic province of the Southern Appalachian fold and thrust belt. Rocks of this province are of Cambrian to Pennsylvanian age and have been folded and faulted during the Late Paleozoic orogeny. The rocks are pervasively deformed, but mildly metamorphosed to apparently unmetamorphosed silicious and calcareous sedimentary rocks.

Rocks at the site have been by the US Geological Survey to be undifferentiated Ordovician-Cambrian Knox Group rocks consisting of light-gray to light-brown locally sandy dolomite, dolomitic limestone, and limestone; characterized by abundant light-colored chert. Karst topography and caves occur locally in the area.

Residual soils in the region are primarily the product of in-situ chemical decomposition of the parent rock. The extent of the weathering is influenced by the mineral composition of the rock and defects such as fissures, faults and fractures. The residual profile can generally be divided into three zones:

- An upper zone near the ground surface consisting of red clays and clayey silts which have undergone the most advanced weathering;
- An intermediate zone of less weathered micaceous sandy silts and silty sands, frequently described as “saprolite”, whose mineralogy, texture and banded appearance reflects the structure of the original rock; and
- A transitional zone between soil and rock termed partially weathered rock (PWR). Standard penetration resistances exceeding 100 blows per foot define partially weathered rock locally.

The boundaries between zones of soil, partially weathered rock and bedrock are erratic and poorly defined. Weathering is often more advanced next to fractures and joints that transmit water, and in mineral bands that are more susceptible to decomposition. Boulders and rock lenses are sometimes encountered within the overlying PWR or soil matrix. Consequently, significant fluctuations in depths to materials requiring difficult excavation techniques may occur over short horizontal distances.

According to the USDA NRCS **Web Soil Survey of Bartow County, Georgia** soils located at the site primarily consist of Decatur loam, 2 to 6 percent Slopes (DaB), Etowah loam, 0

to 2 percent slopes (EtA), Etowah loam, 2 to 6 percent slopes (EtB), and Minvale-Shack complex, 15 to 30 percent slopes (MsE). The soil series descriptions are below:

The **Decatur series** consists of very deep, well drained, moderately permeable soils that formed in residuum derived from limestone. These soils are on level to strongly sloping uplands in valleys. Slopes are dominantly 1 to 10 percent but range up to 25 percent. Near the type location the mean annual temperature is 62 degrees F., and the mean annual precipitation is more than 49 inches.

The **Etowah series** consists of well drained, moderately high to highly permeable soils that formed in loamy alluvium and/or colluvium derived from sedimentary rock. They are deep to bedrock. They are found on ridges and stream terraces in the Piedmont. Slopes range from 2 to 6 percent. Near the type location, mean annual temperature is 60 degrees F., and mean annual precipitation is 39 inches.

The **Minvale series** consists of very deep, well drained soils that formed in colluvium and the underlying residuum from cherty limestone. These soils are in coves and on foot slopes, benches, fans, and the colluvial portions of side slopes. Permeability is moderate. Slopes range from 2 to 45 percent.

The **Shack series** consists of moderately well drained, very deep soils on uplands. These soils formed in residuum from dominantly cherty limestone. Slopes range from 2 to 25 percent. Near the type location, the mean annual temperature is 60 degrees F, and mean annual precipitation is about 53 inches.

3.2.2 *Surface Drainage:*

Surface water originating from the site generally flows to the south.

3.2.3 *Groundwater:*

Groundwater in the Valley and Ridge typically occurs as an unconfined or semi-confined aquifer condition. Recharge is provided by the infiltration of rainfall and surface water through the soil overburden. More permeable zones in the soil matrix, as well as fractures, joints, solution channels in carbonate rocks and discontinuities such as bedding planes in the underlying bedrock can affect groundwater conditions. The groundwater table in the Valley and Ridge is expected to be a subdued replica of the surface topography.

Based on review of the USGS “*Kingston, Georgia*” topographic quadrangle maps and site observations, the site property is mostly flat with a slight slope grading downward to the

south. The topographic high point is located on the northern portion of the site property and is ±680 feet above mean sea level (amsl). From this high point, the site slopes downward to the south. Shallow groundwater from the site is inferred to generally flow in a similar fashion. On this basis, the general groundwater flow direction for the site is inferred to be to the south.

3.3 PREVIOUS ENVIRONMENTAL REPORTS:

Contour did not receive or review any previous environmental reports associated with the subject site or adjacent properties during this Phase I ESA.

3.4 WETLANDS AND OTHER PERTINENT FACTS:

No evidence of wetlands or *Waters of the U.S. and/or "buffered" State Waters* were observed on the site property.

Please note: a formal Aquatic Resource Delineation and "State Water" Assessment was not part of the scope of this Phase I ESA.

4.0 ENVIRONMENTAL REGULATORY RECORDS

The number of listed sites identified within the approximate minimum search distances (AMSD) from the Federal and State standard environmental records database listings specified in ASTM Standard E 1527-21 are summarized in the following table. Also shown are ASTM supplemental database searched and sites identified within the search distance. This information was compiled by EDR in Regulatory Report No. 7434064.2s, dated September 1, 2023. The complete report by EDR is attached as Appendix D of this report.

NOTES:

NR = Not Requested at this Search Distance
 Sites may be listed in more than one database

Detailed information for sites identified within the AMSDs is provided below, along with an opinion about the significance of the listing to the analysis of RECs in connection with the site property.

4.1 SITE PROPERTY DATABASE FINDINGS

The site property was not identified through the Federal and State environmental records review.

4.2 ADJOINING PROPERTY DATABASE FINDINGS

Adjoining properties, as defined in ASTM Standard E1527-21, were not identified through the Federal and State environmental records review.

4.3 NON-ADJOINING PROPERTY DATABASE FINDINGS

As detailed in the EDR Report, several other facilities on various databases are within the ASTM E1527-21 Approximate Minimum Search Distance (AMSD). Based on factors such as distance to the subject property, topography, media affected (surface water, soil, soil vapor, groundwater, or air), depth to groundwater, anticipated and reported groundwater flow direction away from the subject property, hydrological separation, and/or a “Closed Out” and/or “No Further Action (NFA)” regulatory status, these non-adjoining facilities within the AMSD are unlikely to have current or former releases of hazardous substances and/or petroleum products that could migrate to the subject property and are not considered RECs.

4.4 UNMAPPABLE SITES

Due to inadequate address information or other non-identifying facility information, seven [7] facilities contained within the Federal and State databases could not be plotted on a radius map by EDR. The unplotable facilities were identified in the regulatory report and grouped into an Unmappable Sites Summary (USS). This summary was independently reviewed by Contour to determine if any of the facilities on or, surrounding the site, were included on this list. No facilities listed in the USS were visually identified as being located within the specified search radius distance.

No RECs were identified as a result of the records review in Section 4.0.

5.0 VAPOR ENCROACHMENT SCREENING

The number of listed sites identified within the approximate minimum search distances (AMSD) from the Federal and State standard environmental records database listings specified in ASTM Standard E2600-10 are summarized in the following table. Also shown are ASTM supplemental database searched and sites identified within the search distance. This information was compiled by EDR in Vapor Encroachment Screen Report No. 7434064.2s, dated September 5, 2023. The complete report by EDR is attached as Appendix E of this report.

TP = Target Property

NS = Not Searched

Sites may be listed in more than one database

Detailed information for sites identified within the AMSDs is provided below, along with an opinion about the significance of the listing to the analysis of vapor encroachment conditions in connection with the site property.

5.1 SITE PROPERTY DATABASE FINDINGS

The site property was not identified through the Federal and State environmental records review.

5.2 ADJOINING PROPERTY DATABASE FINDINGS

Adjoining properties, as defined in ASTM Standard E1527-21, were not identified through the Federal and State environmental records review.

5.3 NON-ADJOINING PROPERTY DATABASE FINDINGS

Non-adjoining properties, as defined in ASTM Standard E1527-21, were not identified through the Federal and State environmental records review.

6.0 SITE INFORMATION AND USE

6.1 CURRENT SITE USE

The site visit was conducted by Mr. Andrew G. Riess, Senior Environmental Consultant, of Contour on September 8, 2023. The purpose of the site visit was to visually inspect the site and adjacent properties for evidence of RECs, as defined in Section 1.1 of this report. Specifically, the site and surrounding areas were inspected for the presence of USTs, stained soils or stressed vegetation, noticeable odors, aboveground storage containers, electric or hydraulic equipment possibly containing PCBs, and other solid waste or hazardous substances. Site photographs are attached as Appendix A.

The site visit consisted of a walk-over of the interior and perimeter boundaries of the site, and a curbside reconnaissance of adjacent properties.

NOTE: It should be clearly noted that the ground surface(s) throughout the site property were obscured by thick vegetative growth, and therefore, could not be thoroughly assessed.

6.1.1 Storage Tanks:

No evidence indicating past or present USTs, such as vents, pipes or pumps on the site were identified during the site visit.

No evidence indicating permanently installed ASTs, such as holding racks or foundations, was identified during the site visit.

6.1.2 Hazardous and Petroleum Products Containers/Drums:

No evidence of hazardous substance use, hazardous waste generation, treatment, storage, or disposal on the site was observed on the site.

6.1.3 Heating and Cooling:

No evidence of standard heating ventilating/air condition (HVAC) systems was identified on the site property.

6.1.4 Solid Waste:

Scattered debris and a dilapidated ancillary/barn structure were observed on the

northeastern portion of the site property. The debris consisted of lumber, plastics, building materials, bottles, cans, scrap metal, and other various refuse. Evidence of staining, container spillage, noxious chemical odors, hazardous materials, and/or stressed vegetation was not noted. Therefore, the materials noted above do not appear to have adversely impacted the surface or subsurface environment of the site and are not considered to be a REC in connection with the site property. Nonetheless, the materials should be removed from the site and properly disposed in a permitted waste disposal facility.

6.1.5 Sewage Disposal/Septic Tanks:

No evidence of sewage disposal facilities and/or septic tank systems was identified during this assessment. Sanitary sewage service in the vicinity of the site property is provided by the Bartow County.

6.1.6 Hydraulic Equipment:

No evidence of hydraulic equipment was identified on the site property.

6.1.7 Electrical Transformers:

Polychlorinated Biphenyls (PCBs) are toxic coolants or lubricating oils used in some electrical transformers, hydraulic systems, and other similar equipment.

No electrical transformers were observed on the northwestern portion of the site property. Several pole-mounted and pad-mounted transformers were observed on adjacent properties, and Euharlee Road and Adams Chapel Road. Labels indicating "Non-PCB" were not observed on the transformers. No evidence of spills or releases such as stained soil, stressed vegetation, and/or odors was observed in the vicinity of the transformers. Should a fluid spill from the electrical transformers occur, associated remediation efforts are typically the responsibility of the transformer's owner per Federal Regulation (40 CFR 761.125).

No evidence of aged transformers, power substations, or other potential PCB-containing equipment was observed on the site.

6.1.8 Water Supply and Wells:

No evidence of drinking water wells was observed on-site.

Due to the extensive nature of vegetative growth throughout the site property, a thorough visual identification for water wells was not possible. Given the setting of the site property, water wells may exist on the site property. Any wells discovered during re-development activities should be properly abandoned by a GA-certified well contractor prior to site redevelopment.

6.1.9 Drains and Sumps:

No evidence of drains or sumps was identified during the site visit.

6.1.10 Pits, Ponds, Lagoons, and Surface Waters:

No evidence of pits, ponds, lagoons, and/or permanent surface waters was observed on the site.

6.1.11 Wetlands:

No vegetation or ponded areas that are characteristic of wetlands were observed at the subject property.

Please note that a formal Aquatic Resource Delineation and “State Water” Assessment was not part of the scope of this Phase I ESA.

6.1.12 Strong, Pungent, or Noxious Odors:

No evidence of strong, pungent, or noxious odors was observed on the site property.

6.1.13 Pools of Liquid:

No evidence of pools or sumps containing liquids was observed on the site property.

6.1.14 Stressed Vegetation or Stained Surfaces:

No evidence of stressed vegetation or stained surfaces was observed on the site property.

6.1.15 Stains or Corrosion on Floors, Walls, or Ceilings:

No evidence of stains or corrosion on floors, walls, or ceilings were observed on the site property.

6.1.16 Unidentified Substance Containers:

No evidence of unidentified substance containers was observed on the site property.

6.1.17 Asbestos-Containing Materials (ACMs):

No evidence of suspect ACMs was identified during the site visit.

6.1.18 Lead-Based Paint (LBP):

No evidence of suspect LBP was identified during the site visit.

6.2 PAST SITE USE

Past land uses were investigated to identify RECs, which may have impacted the site. This included interviews with individuals knowledgeable of the site property, review of aerial photographs, and other available standard historical resources.

6.2.1 Chain-of-Title:

A 60-year chain-of-title was not provided to or reviewed by Contour during this Phase I ESA. However, according to available tax assessment records reviewed online at <https://www.qpublic.net/ga/bartow/search.htm> the site property is currently owned by Estate of Cliff Martin (Corey and Jerry Henderson, Executors). Copies of the tax assessment records are attached as Appendix G. ***NOTE: the site owner and/or owner representatives were unable to be contacted/interviewed during this Phase I ESA.***

An environmental lien and activity & use limitation (AUL) search was not included in the scope of this assessment and was not provided to Contour for review by the User.

6.2.2 Fire Insurance Maps Review:

Contour ordered historic fire insurance maps (Sanborn) of the site property and general vicinity from EDR. The site is outside of coverage limits of the historic fire insurance maps researched. A copy of the historical map search summary depicting “no coverage” for the site area is attached as Appendix B.

6.2.3 City Directories:

Contour ordered a City Directory search of the site property and general vicinity of the site from EDR. The directories have tenant listings by address for years covered (1989, 1992, 1995, 2000, 2005, 2010, 2014, 2017, and 2020) by the directory service. According to the Bartow County Tax Assessors office, the site property is not currently addressed and therefore not listed in the provided city directories. Addresses in vicinity of the site property, along Euharlee Road and Adams Chapel Road, are listed as mostly residential with a few commercial listings. Addresses of environmental concern were not identified. A copy of the complete City Directory search is attached as Appendix B.

6.2.4 Aerial Photographs:

Aerial photographs of the site taken in 1938, 1943, 1955, 1960, 1971, 1981, 1988, 1999, 2007, 2010, 2015, and 2019 were provided by EDR and reviewed to identify changes in land use. No other aerial photographs were available for review during this assessment. Photocopies of the aerial photographs provided by EDR are attached as Appendix C.

2019: Showed the site property as mostly agricultural land and undeveloped (wooded and cleared) land. Undeveloped (cleared and wooded) land, a church, and Adams Chapel Road are visible to the north, followed by residential development and undeveloped (wooded and cleared) land. Euharlee Road is visible to the south, followed by undeveloped (wooded and cleared) land and multiple residential and agricultural structures. Agricultural land, undeveloped (wooded and cleared) land, and multiple commercial structures (a storage facility) are visible to the west, followed by McCormick Road, a few residential and commercial structures, and undeveloped (wooded and cleared) land. Undeveloped (wooded and cleared) land and Adams Chapel Road are visible to the east, followed by undeveloped (wooded and cleared) land, a sewer pump station, and residential development.

2015: Showed the site and the adjacent properties to be similar to the 2019 aerial photograph, except there is less agricultural land visible to the west and no sewer pump station visible to the east.

2010: Showed the site and the adjacent properties to be similar to the 2015 aerial photograph.

2007: Showed the site and the adjacent properties to be similar to the 2010 aerial photograph.

- 1999:** Showed the site property as mostly agricultural land and undeveloped (wooded and cleared) land, with an agricultural/ancillary structure on the northeastern portion. Undeveloped (cleared and wooded) land, agricultural land, and Adams Chapel Road are visible to the north, followed by residential development and undeveloped (wooded and cleared) land. Euharlee Road is visible to the south, followed by undeveloped (wooded and cleared) land, agricultural land, and multiple residential and agricultural structures. Agricultural land, undeveloped (wooded and cleared) land, and a few residential structures are visible to the west, followed by McCormick Road, a few residential structures, and undeveloped (wooded and cleared) land. Agricultural land and Adams Chapel Road are visible to the east, followed by undeveloped (wooded and cleared) land and residential development.
- 1988:** Showed the site and the adjacent properties to be similar to the 1999 aerial photograph, except there are a few residential structures and no residential development to the east of Adams Chapel Road.
- 1981:** Showed the site and the adjacent properties to be similar to the 1988 aerial photograph.
- 1971:** Showed the site and the adjacent properties to be similar to the 1981 aerial photograph, except there are fewer residential structures visible surrounding the site.
- 1960:** Showed the site and the adjacent properties to be similar to the 1971 aerial photograph.
- 1955:** Showed the site and the adjacent properties to be similar to the 1960 aerial photograph.
- 1943:** Showed the site and the adjacent properties to be similar to the 1955 aerial photograph.
- 1938:** Showed the site and the adjacent properties to be similar to the 1943 aerial photograph, except there is no agricultural/ancillary structure on the northeastern portion.

6.2.5 Additional Historical Sources:

Contour ordered historic USGS topographic maps for years dated 1891, 1896, 1906, 1908, 1972, 2014, 2017, and 2020 of the site property and general vicinity from EDR. The maps

were reviewed to identify changes in land use. The historic maps reviewed revealed similar land use changes for the site property and adjacent properties as previously described in the aerial photograph review in Section 6.2.4. Photocopies of the historic maps reviewed are attached as Appendix F.

6.2.6 Historical Use Conclusions:

During at least the late-1930s, the site property consisted of mostly agricultural land and undeveloped (wooded and cleared) land. From the mid-1940s to present-day, the site property consisted of mostly agricultural land and undeveloped (wooded and cleared) land, with an agricultural/ancillary structure on the northeastern portion.

The agricultural use of the subject property and adjoining properties has likely included agricultural related chemicals, including fertilizers, pesticides and/or herbicides. These chemicals may accumulate in shallow soil throughout the agricultural areas, particularly in drainage areas. The residual chemicals are typically limited to shallow, near surface soil, and are considered a de minimis condition. During redevelopment of the subject property, soils should be appropriately managed in accordance with applicable regulations. A review of aerial photographs and topographic maps revealed no evidence of significant historical pesticide storage buildings at the subject property and adjoining properties. In addition, no spills or releases of hazardous materials have been identified in association with agricultural activities within the study area during the course of this assessment. Therefore, the historical agricultural use of the subject property and adjoining properties is not considered a REC.

Data failures were encountered in the research conducted for this assessment. Gaps in the data of more than five [5] years exist for the periods between 1896 to 1906, 1908 to 1938, 1943 to 1955, 1960 to 1971, 1972 to 1981, 1981 to 1988, 1988 to 1999, and 1999 to 2007. Considering the known prior uses of the site property described in the paragraph above, the data gaps are not considered to be significant.

Available historical records reviewed did not identify facilities, which utilize, store, and/or generate petroleum substances and/or hazardous chemicals/wastes located on or in the vicinity of the site property.

6.2.7 Interviews:

Contour contacted Mr. James Baker, with Macallan Capital LLC (report user). Mr. Baker provided general information about the site property. On August 18, 2023, Mr. Baker completed an ASTM E1527-21 User Questionnaire that is attached as Appendix H.

Contour requested available file information from Ms. Brandy Nation, Administrative Services Coordinator, with the Bartow County Fire & Emergency Services on September 5, 2023, regarding the storage of hazardous substances, the presence of USTs/ASTs, and past chemical emergency response situations to the subject site and adjacent properties. According to Ms. Nation there were no records available regarding the site property.

NOTE: the site owner and/or owner representatives were unable to be contacted/interviewed during this Phase I ESA.

6.3 SURROUNDING LAND USE

Properties adjoining the site were observed to determine if there was visible evidence of off-site land uses that might adversely affect the environmental integrity of the site. The following properties were observed adjacent to the site (see Figure 2: Subject Property Plan).

6.3.1 North:

Residential development and All About Jesus Ministries/River Church border the site to the north, followed by undeveloped wooded and cleared land.

6.3.2 South:

Euharlee Road borders the site to the south, followed by undeveloped (wooded and cleared) land, agricultural land, and several residential structures.

6.3.3 West:

Euharlee Storage and U-Haul Rentals, agricultural land, and undeveloped (wooded and cleared) land border the site to the west.

6.3.4 East:

Adams Chapel Road and undeveloped (wooded and cleared) land border the site to the east, followed by undeveloped (wooded and cleared) land and residential development.

No industrial activities such as outdoor chemical storage, surface water impoundments, wastewater treatment facilities, or other operations located up gradient, which may impact the site via surface water run-off were identified on adjacent properties.

7.0 ENVIRONMENTAL CONCERNS AND CONCLUSIONS

We have performed the authorized Phase I ESA for the above-referenced site in general conformance with the agreed upon scope of service described in Contour Proposal: CE23MAC-298, dated August 18, 2023, as well as ASTM Standard E1527-21, and the U.S. EPA All Appropriate Inquiries (AAI) Rule. Any exceptions to, or deletions from, this practice are described in Section 2.1 of this report.

This assessment has revealed the following evidence of RECs, HRECs, CRECs and/or significant data gaps in connection with the subject property:

7.1 ON-SITE:

No on-site RECs, HRECs, and/or CRECs were identified during this assessment.

However, the following Business Environmental Risks were identified:

- The agricultural use of the subject property has likely included agricultural related chemicals, including fertilizers, pesticides and/or herbicides. These chemicals may accumulate in shallow soil throughout the agricultural areas, particularly in drainage areas. The residual chemicals are typically limited to shallow, near surface soil, and are considered a *de minimis* condition. During redevelopment of the subject property, soils should be appropriately managed in accordance with applicable regulations.
- Scattered debris and a dilapidated ancillary/barn structure were observed on the northeastern portion of the site property. The debris consisted of lumber, plastics, building materials, bottles, cans, scrap metal, and other various refuse. Evidence of staining, container spillage, noxious chemical odors, hazardous materials, and/or stressed vegetation was not noted. Therefore, the materials noted above do not appear to have adversely impacted the surface or subsurface environment of the site and are not considered to be a REC in connection with the site property. Nonetheless, the materials should be removed from the site and properly disposed in a permitted waste disposal facility.
- Due to the extensive nature of vegetative growth throughout the site property, a thorough visual identification for water wells was not possible. Given the setting of the site property, water wells may exist on the site property. Any wells discovered during re-development activities should be properly abandoned by a GA-certified well contractor prior to site redevelopment.

7.2 OFF-SITE:

No off-site RECs, HRECs, and/or CRECs were identified during this assessment.

No significant data gaps were identified in connection with the site property.

Based on results of this assessment, no further environmental investigation is warranted.

8.0 VAPOR ENCROACHMENT SCREENING

As required by ASTM E1527-21 and the U.S. EPA “AAI” Rule, Contour conducted a Tier 1 Vapor Encroachment Screening (VES) of the site property in general conformance with ASTM E2600-10 “Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions”. The purpose of the Tier 1 VES is to identify VECs associated with the site and/or surrounding property.

Based on the Tier 1 assessment conducted, Contour concludes that no potential VECs were identified during this assessment.

9.0 ENVIRONMENTAL PROFESSIONAL DECLARATION

This Phase I Environmental Site Assessment (ESA) Report documents the research methodology used by qualified environmental professionals of Rimkus Consulting Group, Inc., **DBA Contour Environmental LLC** (Contour) to identify recognized environmental conditions using the scope and limitations of ASTM Standard Practice E1527-21 and Contour Proposal No: CE23MAC-298, dated August 18, 2023, between Macallan Capital LLC and Contour Environmental, LLC.

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental professional as defined in §312.10 of 40 CFR 312” and “we have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the site property. We have developed and performed “all appropriate inquires” in conformance with the standards and practices set forth in 40 CFR Part 312.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Contour Environmental, LLC were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available business directory data at approximately five year intervals.

RECORD SOURCES

The EDR City Directory Report accesses a variety of business directory sources, including Haines, InfoUSA, Polk, Cole, Bresser, and Stewart. Listings marked as EDR Digital Archive access Cole and InfoUSA records. The various directory sources enhance and complement each other to provide a more thorough and accurate report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. A check mark indicates where information was identified in the source and provided in this report.

Contact: Theresa Shively

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

EXECUTIVE SUMMARY

TARGET PROPERTY SEARCH RESULTS

The target property was not listed in any of the databases searched by EDR.

DATABASES WITH NO MAPPED SITES

No mapped sites were found in EDR's search of available ("reasonably ascertainable ") government records either on the target property or within the search radius around the target property for the following databases:

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Lists of state and tribal leaking storage tanks

LUST: The Leaking Underground Storage Tank Incident Reports contain an inventory of reported leaking underground storage tank incidents. The data come from the Department of Natural Resources' Confirmed Release List.

A review of the LUST list, as provided by EDR, and dated 01/06/2023 has revealed that there is 1 LUST site within approximately 0.5 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
<i>JO-JO MKT</i> Cleanup Status: NFA - No Further Action Facility Id: 04080160	<i>851 EUHARLEE RD SW</i>	<i>WSW 1/4 - 1/2 (0.407 mi.)</i>	<i>2</i>	<i>10</i>

Lists of state and tribal registered storage tanks

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Natural Resources' Underground Storage Tank Database.

A review of the UST list, as provided by EDR, and dated 01/06/2023 has revealed that there is 1 UST site within approximately 0.25 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 06/22/2023	Source: EPA
Date Data Arrived at EDR: 07/06/2023	Telephone: N/A
Date Made Active in Reports: 07/24/2023	Last EDR Contact: 08/02/2023
Number of Days to Update: 18	Next Scheduled EDR Contact: 10/09/2023
	Data Release Frequency: Quarterly

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 06/22/2023	Source: EPA
Date Data Arrived at EDR: 07/06/2023	Telephone: N/A
Date Made Active in Reports: 07/24/2023	Last EDR Contact: 08/02/2023
Number of Days to Update: 18	Next Scheduled EDR Contact: 10/09/2023
	Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Lists of Federal sites subject to CERCLA removals and CERCLA orders

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 03/26/2023

Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Data Release Frequency: Quarterly

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 07/24/2023	Source: Environmental Protection Agency
Date Data Arrived at EDR: 07/31/2023	Telephone: (404) 562-8651

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Lists of state- and tribal hazardous waste facilities

SHWS: Hazardous Site Inventory

State Hazardous Waste Sites. State hazardous waste site records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. Available information varies by state.

NON HSI: Non-Hazardous Site Inventory

This list was obtained by EDR in 1998 and contains property listings that have reported contamination of soil or groundwater under the Georgia Hazardous Site Response Act (HSRA). These sites were not placed on the Georgia Priority list (Hazardous Site Inventory or HSI) because their hazard evaluation scores did not exceed the threshold levels established for sites posing an imminent threat to health or the environment. Disclaimer provided by Rindt-McDuff Associates - the database information has been obtained from publicly available sources produced by other entities. While reasonable steps have been taken to insure the accuracy of the data, RMA does not guarantee the accuracy of the data. No claim is made for the actual existence of pollution at any site. This data does not constitute a legal opinion.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO FIRE TRAINING: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facility's name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PART 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration's document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health

Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Child Care Centers

GEOCHECK[®] - PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

EUHARLEE ROAD
EUHARLEE ROAD
CARTERSVILLE, GA 30120

TARGET PROPERTY COORDINATES

Latitude (North):	34.15006 - 34° 9' 0.22"
Longitude (West):	84.899576 - 84° 53' 58.47"
Universal Transverse Mercator:	Zone 16
UTM X (Meters):	693648.4
UTM Y (Meters):	3780592.8
Elevation:	675 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	15932823 KINGSTON, GA
Version Date:	2020

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General South

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

<u>Flood Plain Panel at Target Property</u>	<u>FEMA Source Type</u>
13015C0245G	FEMA FIRM Flood data
<u>Additional Panels in search area:</u>	<u>FEMA Source Type</u>
Not Reported	

NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u>	<u>NWI Electronic Data Coverage</u>
KINGSTON	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>
Not Reported		

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era: Paleozoic
System: Ordovician
Series: Ordovician
Code: O (decoded above as Era, System & Series)

GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: TALLAPOOSA

Soil Surface Texture: gravelly - silt loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Well drained. Soils have intermediate water holding capacity. Depth to water table is more than 6 feet.

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: LOW

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 20 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Permeability Rate (in/hr)	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	4 inches	gravelly - silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 2.00 Min: 0.60	Max: 5.00 Min: 4.50
2	4 inches	10 inches	gravelly - loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand.	Max: 2.00 Min: 0.60	Max: 5.00 Min: 4.50
3	10 inches	19 inches	gravelly - loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 2.00 Min: 0.60	Max: 5.00 Min: 4.50
4	19 inches	60 inches	weathered bedrock	Not reported	Not reported	Max: 0.06 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinator soil types may appear within the general area of target property.

Soil Surface Textures: loam
silt loam

Surficial Soil Types: loam
silt loam

Shallow Soil Types: silt loam
sandy clay loam

Deeper Soil Types: loamy fine sand
stratified

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by Contour Environmental, LLC were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDR's Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Search Results:**Coordinates:**

ASTM User Questionnaire

ASTM E 1527-21 USER QUESTIONNAIRE

In order to qualify for one of the *Landowner Liability Protections (LLPs)* offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the “*Brownfields Amendments*”), the user shall conduct the following inquiries required by 40 CFR 312.25, 312.28, 312.29, 312.30, and 312.31. The user should provide the following information to the environmental professional. Failure to conduct these inquiries could result in a determination that “*all appropriate inquiries*” (AAI) is not complete.

Yes (Y), No (N), Unknown (U) Y N U

(1.) Environmental liens that are filed or recorded against the *subject property* (40 CFR 312.25).

Did a search of *land title records* (or judicial records where appropriate, see *Note 1* below) identify any *environmental liens* filed or recorded against the *subject property* under federal, tribal, state or local law?

NOTE 1—In certain jurisdictions, federal, tribal, state, or local statutes, or regulations specify that *environmental liens* and AULs be filed in judicial records rather than in *land title records*. In such cases judicial records shall be searched for *environmental liens* and AULs.

(2.) Activity and use limitations that are in place on the *subject property* or that have been filed or recorded against the *subject property*.

Did a search of *land title records* (or judicial records where appropriate, see *Note 1* above) identify any AULs, such as *engineering controls*, land use restrictions or *institutional controls* that are in place at the *subject property* and/or have been filed or recorded against the *subject property* under federal, tribal, state or local law?

(3.) Specialized knowledge or experience of the person seeking to qualify for the LLP (40 CFR 312.28).

Do you have any specialized knowledge or experience related to the *subject property* or nearby properties? For example, are you involved in the same line of business as the current or former *occupants* of the *subject property* or an *adjoining property* so that you would have specialized knowledge of the chemicals and processes used by this type of business?

(4.) Relationship of the purchase price to the fair market value of the *subject property* if it were not contaminated (40 CFR 312.29).

Does the purchase price being paid for this *subject property* reasonably reflect the fair market value of the *subject property*? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the *subject property*?

(5.) Commonly known or *reasonably ascertainable* information about the *subject property* (40 CFR 312.30).

Are you aware of commonly known or *reasonably ascertainable* information about the *subject property* that would help the *environmental professional* to identify conditions indicative of *releases* or threatened *releases*? For example:

- (a.) Do you know the past uses of the *subject property*?
- (b.) Do you know of specific chemicals that are present or once were present at the *subject property*?
- (c.) Do you know of spills or other chemical *releases* that have taken place at the *subject property*?
- (d.) Do you know of any environmental cleanups that have taken place at the *subject property*?

Describe (if known):

Yes (Y), No (N), Unknown (U) Y N U

(6.) The degree of obviousness of the presence or likely presence of contamination at the *subject property*, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31).

Based on your knowledge and experience related to the *subject property* are there any *obvious* indicators that point to the presence or likely presence of *releases* at the *subject property*?

Appendix I
Personnel Qualifications

CONTOUR ENVIRONMENTAL, LLC.

A Rimkus Company

MR. ANDREW G. RIESS, EP
SENIOR ENVIRONMENTAL CONSULTANT

EXPERTISE

Mr. Riess has 6 years of professional experience as an Environmental Consultant/Scientist and has performed a wide range of complex investigations in the following areas:

- Environmental assessment and analysis (Phase I & II);
- Environmental assessment: due diligence;
- Environmental Risk Assessments;
- Underground storage tank closures;
- Release Notifications;
- Corrective Action Plans (CAP-A/CAP-B);
- Soil and groundwater remediation;
- Brownfield Investigations/State Coordination;
- Rezoning Applications;
- Wetland identification and delineation;
- Building inspections for asbestos containing materials and lead based paint

PROJECT EXPERIENCE

Performed Phase I ESAs and Phase II Site Investigations on a wide range of residential retail/commercial, and industrial/manufacturing sites for large national and regional banks, private investment groups, private landowners, and industrial and commercial facilities.

Performed subsurface investigations involving contaminated soil and/or groundwater. Projects have included a variety of underground storage tank, dry cleaning, and industrial/manufacturing facilities.

Performed advanced environmental investigations (soil and groundwater remediation, underground storage tank (UST) closure, Release Notifications, Corrective Action Plans) for property owners and UST owner/operators, and ACM and Lead Based Paint Assessments of commercial, industrial, retail, educational, and residential facilities.

Performed wetland identification and delineations of jurisdictional wetlands/*Waters of the U.S.*, and "State Waters" in Georgia. Work included hydrologic evaluations, soil analysis, vegetation identification, and technical report preparation.

Performed baseline and ongoing sediment assessments

EDUCATION AND PROFESSIONAL AFFILIATIONS

- University of Georgia - Athens, GA - B.S. in Biology - May 2014
- OSHA 40-hour Hazardous Waste Operations and Response - 360 Training (2022)
- Accredited AHERA Building Inspector (Certificate No. 19314)
- Accredited LEHA Lead Inspector (Certificate No. 5479)
- 40 Hour Army Corps of Engineers Basic Wetland Delineation course

CONTOUR ENVIRONMENTAL, LLC.

A Rimkus Company

**MR. DANA A. SPOTTS, REPA, EP
PRESIDENT**

EXPERTISE

Mr. Spotts has 27 years of diverse experience as an Environmental Professional / Consultant and has performed a wide range of complex investigations in the United States specializing in the following areas:

- Environmental assessment: due diligence and real estate transaction
- Environmental assessment and analysis (Phase I, II & III);
- Environmental Risk Assessments;
- Underground storage tank closures;
- Corrective action plans (CAP-A / CAP-B);
- Soil and groundwater remediation planning;
- Comprehensive Brownfield Investigations/State Coordination;
- Wetland identification and delineation;
- Jurisdictional waters and State Waters determination/delineation;
- Section 404 CWA NWP and IP permitting;
- Mitigation planning and mitigation banking;
- Riparian buffer restoration;
- Local and State stream buffer variance coordination/processing;
- National Environmental Policy Audits (NEPA);
- Georgia Environmental Policy Audits (GEPA);
- Categorical Exclusions (CEs);
- Environmental Impact Statement (EIS);
- Comprehensive building inspections for asbestos containing materials, urea formaldehyde insulation, and lead-based paint;
- Air monitoring and analysis of airborne asbestos fiber concentrations;
- Preparation of comprehensive asbestos abatement specifications.

PROJECT EXPERIENCE

Personally performed/managed over 4,500 Phase I ESAs and Phase II Site Investigations on a wide range of residential retail/commercial, and industrial/manufacturing sites for large national and regional banks, private investment groups, private landowners, and industrial and commercial facilities.

Personally performed/managed over 2,500 subsurface investigations involving contaminated soil and/or groundwater. Projects have included a wide variety of underground storage tank, dry cleaning, industrial/manufacturing facilities as well as landfills.

Personally performed and managed over 3,500 wetland Identification and delineations of jurisdictional wetlands/*Waters of the U.S.*, and "State Waters" in the GA, AL, FL, TN, SC,

NC, and VA. Work included hydrologic evaluations, soil analysis, vegetation identification, and technical report preparation.

Personally performed and secured at least 1,500 Nationwide Permits from the United States Army Corps of Engineers for a broad range of projects including private, residential, commercial, industrial, and governmental projects. Work included wetland mitigation banking/planning.

Personally performed and secured at least 75 Individual Permits from the United States Army Corps of Engineers including commercial, industrial, and governmental projects. Work included archaeological surveys; aquatic and terrestrial protected species assessments, alternative site analysis, avoidance and minimization planning, and stream/wetland mitigation banking/planning.

Personally performed and secured at least 100 "LIA" and GA EPD stream buffer encroachment variances in GA. Work involved assessing storm water conditions, pre and post construction as well as providing solutions to reduce contaminant loading as per state requirements.

EDUCATION AND PROFESSIONAL AFFILIATIONS

- California University of Pennsylvania - Pittsburgh, PA - B.A. in Environmental Resources - Minor in Field Biology - May 1992
- Dale Carnegie Course: Influential Leadership Training
- OSHA 40-hour Hazardous Waste Operations and Response - GTS (2012)
- Georgia State University - Delineation of Jurisdictional Wetlands of the Southeast
- Identification of Wetland Plant Species & Hydric Soil Conditions - Biotic Consultants, Inc.
- Identification of Jurisdictional Wetlands with Emphasis on Hydric Soil Conditions - WTI
- 38 Hour Army Corps of Engineers Wetland Delineation and Management Training Program - Richard Chinn Environmental Training
